

How many colleagues a Tunisian minister has

50 ministers have none — they are the sole recorded member of their cabinet, or overlapped no one by 30 days. Transitivity is 0.82, which is a property of the construction: everyone in a cabinet is joined to everyone else, so the layer is a union of near-cliques rather than a sparse social network. Read degree as exposure, not popularity. The spike near 175 is a single composite roster whose members all take the same degree — a fact about how the source chunks cabinets.
