

Women in each recorded cabinet roster, 1943-2025

One mark per roster in `cabinets`, sized by its membership — not one per government. The 56 rows span 25 distinct start years, because the sources chunk rosters differently: the 2021 government appears three times, at 44% of 23, 35% of 26, 26% of 57. Vertical spread within a year is the sources disagreeing, not the cabinet changing. 21 rosters record no women at all, the last of them in 2011. Fig. 2 is the era-level view, computed from coded gender per person rather than from this table.
